

MATTHEW J.S. SOLANO

LINKEDIN | PORTFOLIO | PROFESSIONAL POSITIONING

Upland, California | (909) 329-5490 | matthewsolano187@yahoo.com

POSITIONING

Core narrative: Apple technical support is the professional foundation; practical generative AI, product prototyping, and workflow design are the credible next chapter. Use accurate status labels and emphasize transferable troubleshooting habits.

LINKEDIN HEADLINE OPTIONS

- AI Technical Support | 8 Years of Apple Customer-Facing Support | Remote Troubleshooting | Generative AI & Product Prototyping
- Technical Support & Customer Solutions Professional | Apple Repair and Remote Support | Generative AI Workflows
- AI Customer Success & Solutions Support | Technical Troubleshooting | Relationship Recovery | Product Prototyping
- IT Support Professional | Device Repair | Remote Support | User Education | Growing in Generative AI

FULL ABOUT SECTION

I am a technical support and customer solutions professional in Upland, California, with approximately eight years of Apple customer-facing experience across in-store support, iPhone and iPad repair, and remote phone troubleshooting. My work has centered on making difficult technology understandable: isolating hardware, software, account, service, and ecosystem issues; guiding customers through complex steps; restoring trust in high-friction situations; and mentoring new technicians. I am now applying that foundation to generative AI, prompt engineering, AI-assisted application development, and practical workflow design. My active work includes the Right Side Up Bible App prototype, children's publishing through Amazon KDP, local AI and generative media experiments, AI-assisted music production, and experimental app and game prototypes. I am pursuing roles where technical judgment, customer empathy, and clear communication help users adopt and succeed with complex products.

SHORT ABOUT SECTION

Technical support professional with approximately eight years of Apple customer-facing experience across repair, in-store support, and remote phone troubleshooting. I combine structured diagnosis, relationship recovery, and technician mentoring with active generative AI, prompt engineering, and AI-assisted product work.

EXPERIENCE DESCRIPTIONS

Apple - Technical Expert

Diagnosed and repaired iPhones and iPads; resolved hardware, software, account, service, and ecosystem issues; guided personal and business customers; recovered difficult relationships; and mentored new technicians.

Apple - Technical Specialist

Delivered hands-on device, service, setup, backup, security, and purchasing support while translating technical findings into clear options.

Apple - At Home Advisor

Diagnosed issues remotely without seeing the device, guided customers through complex troubleshooting, documented cases, and rebuilt confidence during difficult calls.

MarketSource - Wireless Manager

Led wireless consultations, sales support, customer education, and employee training across consumer technology products.

SKILLS RECOMMENDATIONS

- Technical Support: iPhone and iPad repair, iOS and Apple ecosystem troubleshooting, hardware/software diagnostics, account and service support, remote phone support, case documentation, escalation judgment
- Customer Experience: de-escalation, relationship recovery, solution discovery, customer education, business-needs support, purchasing consultation
- AI & Product: generative AI, prompt engineering, AI-assisted development, Google AI Studio, ChatGPT, Gemini, Ollama, ComfyUI, Stable Diffusion, Flux
- Leadership: technician mentoring, onboarding and training, knowledge sharing, cross-functional collaboration

FEATURED-SECTION PLAN

- AI Technical Support resume PDF

- Portfolio website
- Right Side Up Bible App case study labeled Active Prototype
- Chase the Cheetah publishing case study with published status limited to that title
- Local AI Lab learning log or workflow overview
- Generative AI with Large Language Models certification

PROFESSIONAL BIO

Matthew J.S. Solano is a technical support and customer solutions professional with approximately eight years of Apple experience spanning device repair, in-store troubleshooting, remote phone support, customer relationship recovery, and technician mentoring. He is expanding that foundation through hands-on generative AI, prompt engineering, local AI experimentation, AI-assisted product prototyping, publishing, and creative production workflows.

PORTFOLIO INTRODUCTION

This portfolio shows how I approach difficult technology problems: understand the user, isolate the issue, communicate clearly, test deliberately, and improve the experience. My Apple work established that discipline; my current AI projects demonstrate how I apply it to emerging tools and product ideas. Every project is labeled by its real completion status.

PROJECT SUMMARIES

Right Side Up Bible App | ACTIVE PROTOTYPE / IN DEVELOPMENT

An AI-assisted Bible reading and study prototype focused on a usable reading, note-taking, search, and exploration experience.

- Role: product planning, feature design, interface iteration, testing, and AI-assisted coding.
- Challenges: keyboard behavior, responsive layouts, reading continuity, search, maps, and clear interaction patterns.
- Tools: AI coding assistants and iterative design/testing workflows.
- Direction: continue validating core reading and study workflows before presenting the product as complete.

Children's Book Publishing Workflow | PUBLISHED AND IN DEVELOPMENT

A repeatable creative-production workflow spanning manuscript development, illustration planning, layout, and Amazon KDP publishing; Chase the Cheetah is published, while other books remain in development.

- Role: manuscript development, prompt engineering, character-consistency planning, Canva layout, publishing setup, and quality review.
- Challenges: consistent characters and settings, unwanted text, anatomy errors, and page-to-page visual continuity.
- Skills demonstrated: requirements writing, visual QA, iterative problem solving, metadata, and publishing workflow management.

Local AI and Generative Media Lab | ACTIVE LEARNING / EXPERIMENTATION

A hands-on learning environment for local language models and image-generation workflows.

- Tools: Ollama, ComfyUI, Stable Diffusion, Flux, local LLMs, and GPU-based generation.
- Focus: model behavior, prompt structure, workflow design, output evaluation, and local-versus-cloud tradeoffs.
- Direction: turn useful experiments into documented, repeatable workflows without overstating production readiness.

AI Music Production Workflow | ACTIVE PRODUCTION WORKFLOW

A structured AI-assisted process for developing song concepts and organizing releases.

- Tools and activities: Suno, lyrics, style prompting, metadata, YouTube descriptions, tags, and release organization.
- Challenges: controlling arrangement, pacing, vocal direction, and variation across generated outputs.
- Skills demonstrated: creative direction, prompt iteration, content packaging, and workflow organization.

AI-Assisted Application and Game Prototypes | EXPERIMENTAL / IN DEVELOPMENT

Early application and game concepts used to practice product design, debugging, and AI-assisted coding.

- Role: requirements definition, feature planning, UI iteration, testing, and defect communication.
- Challenges: layout, input, state, animation, and translating natural-language intent into reliable behavior.
- Status: experimental prototypes, not completed production applications.

CONTACT COPY

Open to AI technical support, product support, IT support, solutions support, and customer success opportunities. Based in Upland, California. Contact: (909) 329-5490 | matthewsolano187@yahoo.com
