JUNIOR GAME DEVELOPMENT | AI EVALUATION | TECHNICAL QA

DEVELOPER PROFILE

AI-assisted application and game prototype builder with an A.S. in Computer Information Systems and a professional foundation in technical diagnosis, testing, documentation, and clear explanation. Develops early interactive concepts through requirements definition, feature planning, interface iteration, debugging, and hands-on validation, including problems involving layout, input, state, and animation. Brings foundational Python and API concepts, practical experience evaluating AI-generated outputs, and a strong interest in extending this foundation into Panda3D workflows and C++ game-engine integration.

TECHNICAL STRENGTHS

AI-Assisted Coding | Foundational Python & API Concepts | Application & Game Prototyping | Debugging & Defect Analysis | Requirements & Feature Planning | UI / Input / State / Animation Concepts | Test Design & Output Verification | Technical Documentation | Prompt Engineering | Model Evaluation & Feedback | GitHub Pages Deployment | Remote Collaboration

SELECTED DEVELOPMENT PROJECTS

AI-ASSISTED APPLICATION & GAME PROTOTYPES | Experimental / In Development

- Create early interactive concepts to practice requirements definition, feature planning, interface iteration, testing, debugging, and AI-assisted implementation.
- Investigate layout, input, application state, animation, and the translation of natural-language intent into consistent interactive behavior.
- Review generated solutions, identify defects or unclear logic, refine instructions, test revisions, and document whether behavior matches the intended design.

RIGHT SIDE UP BIBLE APPLICATION | Active Prototype / In Development

- Plan and test a responsive reading and study application with notes, search, maps, navigation, keyboard behavior, and reading-continuity features.
- Use AI coding assistants for implementation support while personally validating interface behavior, reproducing defects, communicating fixes, and iterating on requirements.

LOCAL AI & GENERATIVE MEDIA LAB | Experimental / Active Learning

- Configure, compare, and document local language and image-generation workflows using Ollama, Llama models, ComfyUI, Stable Diffusion, and Flux.
- Evaluate model behavior, output quality, workflow reliability, and hardware constraints; convert useful findings into repeatable testing and troubleshooting practices.

PROFESSIONAL EXPERIENCE

TECHNICAL EXPERT | APPLE | RANCHO CUCAMONGA, CA | 02/2022 - 07/2026

- Diagnosed complex hardware, software, account, and service issues by gathering evidence, reproducing behavior, testing possible causes, documenting findings, and communicating decisions clearly.
- Reviewed technical outcomes for accuracy, adapted troubleshooting when new evidence emerged, and mentored technicians on structured diagnosis and defect communication.

TECHNICAL SPECIALIST / AT HOME ADVISOR | APPLE | CALIFORNIA & REMOTE | 09/2018 - 02/2022

- Provided in-person and remote technical support, guided multi-step troubleshooting, maintained written case context, and collaborated with distributed support teams on escalations.

EDUCATION & CREDENTIAL

Chaffey College - A.S., Computer Information Systems; A.A., Business & Technology; A.A., Arts & Humanities | 05/2018

Generative AI with Large Language Models - DeepLearning.AI / Coursera | 01/2026
